Auerbach, R[udolf].
THE ELECTRICAL CONDUCTIVITY OF SOLID DISPERSOIDS. 4 May 61 [13]p. 7 refs. 61-16531
Order from SLA $1.60

Trans. of Kolloid-Z[eitschrift] (West Germany) 1949, v. 112 [no. 1] p. 60-66.

DESCRIPTORS: *Colloids, *Electrical conductance, *Semiconductors.

Mixtures of disperse conductors or semiconductors with insulating binders show, over a narrow concentration range, a change in electrical resistance of 10^6 to 10^{12}. This critical concentration range moves to lower values as the specific sediment volume of the disperse phase increases. In the critical concentration range, the resistances depend on voltage and, possibly, also on pressure. By forming the solifidying dispersing agent in an electric field, direction-dependent resistances are produced. (Author)
